What customer data does the AI see?

PayFlow · 12 Nov 2026 · v3

The AI never sees who a customer is.

It only gets numbers - never who they belong to. PayFlow adds real names itself, when sending.

How the data flows

INSIDE PAYFLOW

1. **Customer accounts** — Names, emails, phones, addresses, account numbers, balances — Stays in PayFlow

2. **PayFlow groups the accounts** — By days late and balance. Only totals: counts, averages, % by age, region, language — No AI

▼ Only totals leave PayFlow · no personal data

OUTSIDE · AI SERVICE

3. **AI writes the plan and the messages** — A version for each big age group, with blanks: `Hi {{first_name}},` — AI

▼ Back inside PayFlow

INSIDE PAYFLOW

4. **PayFlow sends the message** — Picks their version, fills in details: `Hi {{first_name}},` → `Hi Sarah,` — No AI

What the AI is told about one group

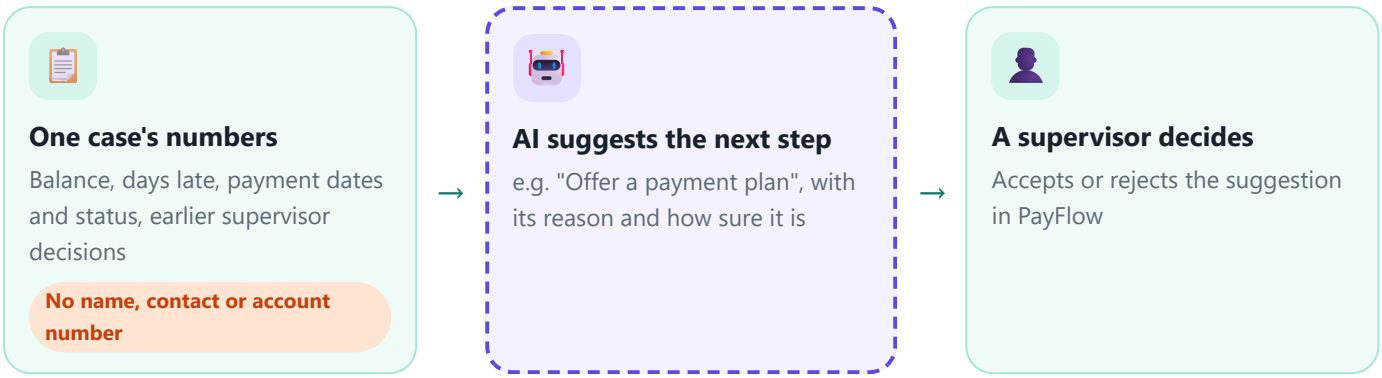

Example · made-up numbers

```
Company     Example Co. · CAD · English
Portfolio   Q3 Residential
Group A     Active · 30–59 days past due · contacted, nothing paid · $500–$1,500
            48 accounts · average balance $1,240.50 · average 44 days late
            92% have an email · 75% have a mobile · languages: EN 40, FR 8
            ages: 35–64 56% · 65+ 25% · 18–34 19% · regions: Ontario 90% · Quebec 10%
```

✕ No names · ✕ No emails or phones · ✕ No addresses · ✕ No account numbers

The case review step

When a workflow reaches an **AI Reassessment** step, the AI suggests the next action for that one case. A supervisor decides - nothing is sent because of the suggestion alone.

Never sent vs. sent

Never sent to the AI

- ✗ Customer names
- ✗ Emails and phone numbers
- ✗ Addresses and postal codes
- ✗ Dates of birth
- ✗ Account numbers
- ✗ Which customer a number belongs to
- ✗ Other companies' data

Sent to the AI

- ✓ Group totals
  counts, averages, and % by age group, region and language
- ✓ Company settings
  name, currency, language, email / SMS, payment options
- ✓ Portfolio name
- ✓ Workflow steps and timings
- ✓ Message text with blanks
  to write or translate it
- ✓ This company's past workflows and review comments
- ✓ One case's numbers
  for the case review step - without who it is

Safeguards

One door to the AI

Only one part of PayFlow talks to it (Groq or Together AI, set in PayFlow's settings) - to write workflows and messages, and for case reviews. Sending and payments: no AI.

Companies kept apart

The AI learns only from the same company's own reviews.

Groups, not people

Usually 20+ accounts per group. Ages and regions only as shares.

No contact details from the AI

A message with a typed phone, email or web address is sent back.

Version 3 · Checked against the PayFlow code (workflow suggestions, message writing per age group, translation and case review) on 12 Nov 2026.
